

NDLW 2023 Strategy a Day

Day 5: Using AI in the Classroom

Personalized Learning: Artificial Intelligence (AI) can be used to **create individualized experiences** for each student based on their needs and interests. This can be accomplished through AI-powered tutors that provide automatic feedback or through AI tools that generate personalized learning materials.

Smart Content Creation: AI can be used to **create interactive and engaging content for students**, such as simulations, games, and other interactive experiences that can help students learn new concepts and skills. AI can also be used to create personalized feedback for students.

Closing Skill Gaps: AI can be used to help students **develop the skills** they need to succeed in the **workplace**. It can provide them with personalized feedback on their resume and interview skills, and can connect them with internship and job opportunities.

As instructors:

- **Start small:** Incorporate AI with a few lessons or assignments.
- **Be transparent:** Let your students know when and how you're using AI.
- **Teach students about AI:** Help them understand how AI works and how it's being used in the world around them.
